

The Nordock DOK-COM™ communication system improves safety and efficiency at the loading dock by providing a synchronized signal to both truck driver and dock personal that is clearly understood. The improved LED light is the brightest and longest lasting available.

STANDARD FEATURES

- Red – Green Inside and Outside LED Lights
- Easy to See and Understand Instruction Signage
- Sun Visor on Lights Prevents Glare
- High Visibility Yellow Housing and Signs
- Lights are Constructed of Durable Polypropylene
- Low Profile Design Reduces Damage From Impact
- Easy Installation To 120 Volt Supply

STANDARD OPERATION

Before loading a truck, dock personnel check that the wheels are chocked then flip a switch on the inside light. The outside light will immediately turn from green to red and alternately the inside light will turn from red to green. After loading is complete the lights are switched back to red inside and green outside allowing the truck to leave the dock.

OPTIONS

- Photo eye or limit switch mounted on door or leveler for automatic light control
- Control panel with dock leveler and door interlocks with operator load function for leveler and inside green light control
- Full Logi-Smart™ integrated panel to control communication lights, leveler and door with full pre-wired interlocks and optional fused disconnect
